- Sorted bank note output
- Six roller storages
- 7th note module optionally available
- Safe according to CEN III, alternatively to UL 291
- Application software "PRO-DISA"
- For standing and sedentary operation

Direkt-Safe TCM

# Safety first!

Limited supply of cash, numerous security features and a self contained money cycle: These are only a few advantages of the serviced cashdeck safe Direkt-Safe TCM.

Money that has just been deposited, immediately stands ready for the next transaction – without any post-editing. The customer always gets the notes that were last put in the safe. This “last in – first out” principle is not only extremely efficient but also time and cost saving.

But, before the bank notes get into the secure safe's inside, they are all taken through a counterfeit control, identified and counted. Non-acceptable bank notes are automatically transferred to the output compartment.

The device archives the money in six collective roller storages (Rollenspeicher). A seventh note module is optionally available. The device deposits up to 400 bank notes in one single storage. Direkt-Safe is designed for shared work space, offering one inpayment and two outpayment compartments.

Safes of security level CEN III or UL 291 are alternatively available. On the basis of the application software “PRO-DISA” we are able to integrate Direkt-Safe online in all system platforms. A pleasing appearance is also possible since we deliver Direkt-Safe in all RAL-colours.

**Dimensions and weight:**

- 700 x 1,000 x 610 mm (w x h x d)
- 480 kg
