

The Pictra® Security System

Everything in focus at any time

The Pictra® Security System at a glance:

- Digital 16-track recorder incl. interfaces (ISDN, modem V24), token ring, ethernet
- Six alarm inputs, two relay outputs
- Networking token ring, ethernet
- Simple integration in LAN-, WAN-networks via integrated interfaces
- Extensive software kit
- Foyer-reader interface installed and activated.

The Pictra® Security System

Everything in focus at any time

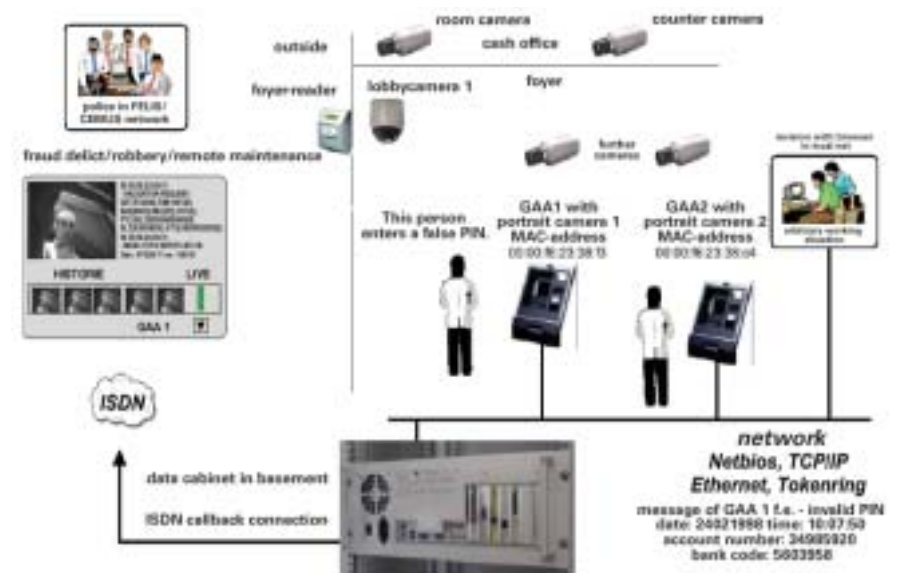

With Pictra® we offer the the next generation digital monitoring system for all security relevant fields.

The system allows a simple administration via all Internet browsers and platform-independent ease of use. The user retrieves live images or recordings via a local network or via a modem. If the alarm is released, Pictra® will transmit the pictures automatically to the monitoring security center.

The integrated long-run archive allows a picture research with individual criteria. The picture determination is also possible during the running recording. All relevant data like date, time, camera number and transaction data are integrated in the picture itself.

Beside technical advantages, Pictra® also offers economical ones: costs for development and maintenance are omitted.

Innovative GAA-connection: UVV-cash office monitoring via Pictra® Security System

Dimensions and weight:

- 480 x 90 x 440 mm (w x h x d)
- 12 kg
